

Intelligent Conversational Sales & Customer Support Agent (Services Industry for Canada)

Project Overview

Develop an AI-powered Sales Agent that acts as a virtual sales representative and customer service executive for service-based businesses in Canada. The AI agent should engage customers through natural conversations, answer questions accurately, qualify leads, capture customer information, schedule appointments, and hand over complex conversations to human staff when necessary.

Unlike a traditional chatbot, the AI Sales Agent should behave like an experienced sales consultant with human-like communication skills, contextual memory, and the ability to understand customer intent across multiple conversation turns. Modern AI customer service systems are increasingly expected to understand free-form conversations, retrieve relevant business information, integrate with CRM systems, and escalate complex cases to humans when appropriate.

Objectives

The AI Sales Agent should:

- Respond instantly (24/7)
 - Communicate naturally like a human
 - Answer customer questions professionally
 - Qualify potential customers
 - Capture customer information
 - Book appointments
 - Generate leads
 - Increase conversion rate
 - Reduce response time
 - Improve customer satisfaction
 - Transfer conversations to human representatives whenever required
-

Supported Communication Channels

The solution should support:

- Website Live Chat
 - WhatsApp Business
 - Facebook Messenger
 - Instagram DM
 - SMS
 - Voice Calls (AI Voice Agent)
 - Email
 - Microsoft Teams
 - Google Business Messages (if available)
 - CRM Chat Widget
-

Human-Like Conversation Requirements

The AI agent must:

Natural Language Understanding

- Understand customer intent
- Understand spelling mistakes
- Understand incomplete sentences
- Understand slang
- Understand follow-up questions
- Remember previous conversation context
- Detect emotions

Example:

Customer:

I need someone to clean my office.

AI:

I'd be happy to help. Could you tell me approximately how many square feet your office is and which city you're located in?

Human Behaviour

The AI should:

- Sound friendly
- Be polite
- Show empathy
- Never sound robotic
- Avoid repetitive responses
- Personalize conversations
- Use customer's name naturally
- Maintain conversational flow

Example:

Instead of:

What service do you require?

Use:

I'd be happy to help. Could you tell me a little about what you're looking for today?

Customer Query Handling

The AI should answer:

General Questions

- Company information
 - Services offered
 - Business hours
 - Coverage areas
 - Pricing
 - Packages
 - Service process
 - Payment methods
 - Refund policy
 - Warranty
 - Cancellation policy
 - Contact information
-

Service Questions

Explain:

- Features
 - Benefits
 - Timeline
 - Deliverables
 - Eligibility
 - Requirements
 - Documents needed
-

Frequently Asked Questions

Maintain a searchable knowledge base capable of answering hundreds of FAQs.

Example:

Customer:

How long does installation take?

AI:

Installation typically takes 2–4 hours depending on the project. After assessing your requirements, we can provide a more accurate estimate.

Sales Capabilities

The AI should function as a trained sales executive.

Capabilities include:

- Understand customer needs
- Ask qualifying questions
- Recommend suitable services
- Upsell premium packages
- Cross-sell additional services
- Handle objections

- Explain value proposition
- Encourage bookings
- Generate quotations
- Close sales where appropriate

Example:

Customer:

I need bookkeeping.

AI:

We offer monthly bookkeeping, payroll management, tax preparation, and financial reporting. May I ask approximately how many employees your business has so I can recommend the best package?

Lead Qualification

Automatically determine:

- Customer type
- Industry
- Company size
- Budget
- Urgency
- Decision maker
- Timeline
- Service location
- Interest level

Lead Scoring:

- Hot Lead
 - Warm Lead
 - Cold Lead
-

Customer Information Capture

Capture:

Personal Information

- Name
 - Email
 - Phone Number
 - Company Name
 - Job Title
-

Service Information

- Required service
 - Budget
 - Timeline
 - Location
 - Preferred appointment time
 - Preferred communication method
-

CRM Information

Automatically create/update:

- Lead profile
 - Conversation history
 - Notes
 - Tags
 - Follow-up reminders
-

Appointment Booking

Integrate with calendars to:

- Check availability
- Suggest available slots
- Book meetings

- Reschedule appointments
 - Cancel appointments
 - Send confirmations
 - Send reminders
-

CRM Integration

Integrate with:

- Salesforce
- HubSpot
- Zoho CRM
- Microsoft Dynamics
- Pipedrive
- GoHighLevel
- Custom CRM APIs

Automatically:

- Create leads
 - Update contacts
 - Add conversation notes
 - Assign sales representatives
 - Trigger workflows
-

Knowledge Base Integration

The AI should learn from:

- Company website
- Service catalog
- Pricing documents
- FAQ documents
- Policies
- PDF files
- Word documents
- Google Drive
- SharePoint

- Internal knowledge base

The system should use Retrieval-Augmented Generation (RAG) so responses remain grounded in the company's approved knowledge rather than relying only on the language model.

Conversation Memory

Remember:

- Previous questions
- Customer preferences
- Services discussed
- Previous appointments
- Previous quotations
- Returning customers

Example:

Customer:

What was the package you recommended yesterday?

AI:

Yesterday we discussed our Premium Commercial Cleaning Package because your office has approximately 40 employees.

Multilingual Support

Support:

- English
- French (Canadian)
- Punjabi (optional)
- Arabic (optional)
- Spanish (optional)

Language should switch automatically based on customer preference.

Voice AI (Optional)

Support:

- Incoming phone calls
- Outgoing follow-up calls
- Natural speech
- Real-time transcription
- Interruptions during conversation
- Human-like voice
- Call summaries

Unlike traditional IVR systems, the voice agent should support natural, multi-turn conversations and perform real-time actions such as retrieving customer information or booking appointments.

Sentiment Analysis

Detect:

- Happy
- Confused
- Frustrated
- Angry
- Urgent

Actions:

- Respond empathetically
 - Escalate high-risk conversations
 - Notify staff if necessary
-

Human Escalation

Automatically transfer conversations when:

- Customer requests a human
- AI confidence is low
- Complaint received
- Legal questions
- Billing disputes
- Refund disputes
- Emergency situations
- VIP customers

The AI should transfer:

- Conversation history
 - Customer information
 - Summary
 - Recommended next steps
-

Follow-Up Automation

Automatically:

- Send quotations
 - Send brochures
 - Send emails
 - Follow up after 24 hours
 - Follow up after 3 days
 - Follow up after 7 days
 - Request reviews
 - Request feedback
-

Analytics Dashboard

Track:

- Total conversations
- Qualified leads
- Conversion rate
- Booked appointments
- Revenue generated

- Customer satisfaction
 - Average response time
 - Resolution time
 - Frequently asked questions
 - Missed opportunities
-

Security & Compliance (Canada)

The solution should support compliance with Canadian privacy expectations by implementing:

- Customer consent where required
 - Encryption of data in transit and at rest
 - Secure authentication and role-based access
 - Audit logs
 - Data retention controls
 - Integration with business privacy policies
 - Clear disclosure when customers are interacting with an AI assistant, where appropriate
-

Performance Requirements

- 24/7 availability
 - Response time under 3 seconds for typical text interactions
 - High uptime (99.9% target)
 - Ability to handle multiple simultaneous conversations
 - Secure cloud deployment
 - Scalable architecture
-

AI Personality

The AI should behave like:

- Professional
- Friendly
- Helpful

- Patient
- Knowledgeable
- Honest
- Confident
- Respectful
- Sales-oriented without being pushy

It should never:

- Guess answers
 - Invent policies
 - Mislead customers
 - Argue
 - Become rude
 - Make legal or financial commitments without authorization
-

Deliverables

The final solution should include:

1. AI Sales Agent
2. AI Customer Support Agent
3. Knowledge Base Integration
4. CRM Integration
5. Appointment Scheduling
6. Lead Capture System
7. Analytics Dashboard
8. Admin Portal
9. Multi-channel Messaging
10. Voice AI (optional)
11. Conversation Logs
12. Reporting Dashboard
13. Human Escalation Workflow
14. API Integrations
15. Documentation and Administrator Training
